virtru

Virtru Data Protection Gateway

Automatically protect data before it leaves your network and maintain control wherever it goes.

Virtru Data Protection Gateway enhances your security posture by adding a layer of data-centric protection to emails and attachments generated by CRM, helpdesk, and custom applications and unprotected endpoints. Seamless integration with your existing infrastructure and fully-hosted deployments make administration painless and reduce time to value.

Privacy

Keep communications with patients, customers, and colleagues private.

Compliance

Maintain compliance with data privacy regulations such as HIPAA, GDPR, PCI, and CCPA.

Secure Sharing

Protect internal and external sharing workflows with coworkers and partners.

Keep Your Emails Private, Compliant, and Secure

- Maintain privacy and compliance wherever emails are shared by encrypting messages and attachments before they leave your network.

- Protect messages sent from Salesforce, Zendesk, and other SaaS, helpdesk, or custom applications, without disrupting existing processes.

- Enforce Data Loss Prevention (DLP) policies with predefined or custom rule sets to scan email and attachments, then detect and protect sensitive data.

- Keep control of protected emails and attachments with access revocation, expiration, disable forwarding, and attachment watermarking.

- Enable seamless external recipient experiences that don't require new accounts, passwords, or software installation.

- Support rapid time-to-value and reduce administrative overhead with fully-hosted deployments and seamless integrations with existing mail flow infrastructure.

Supported Workflows
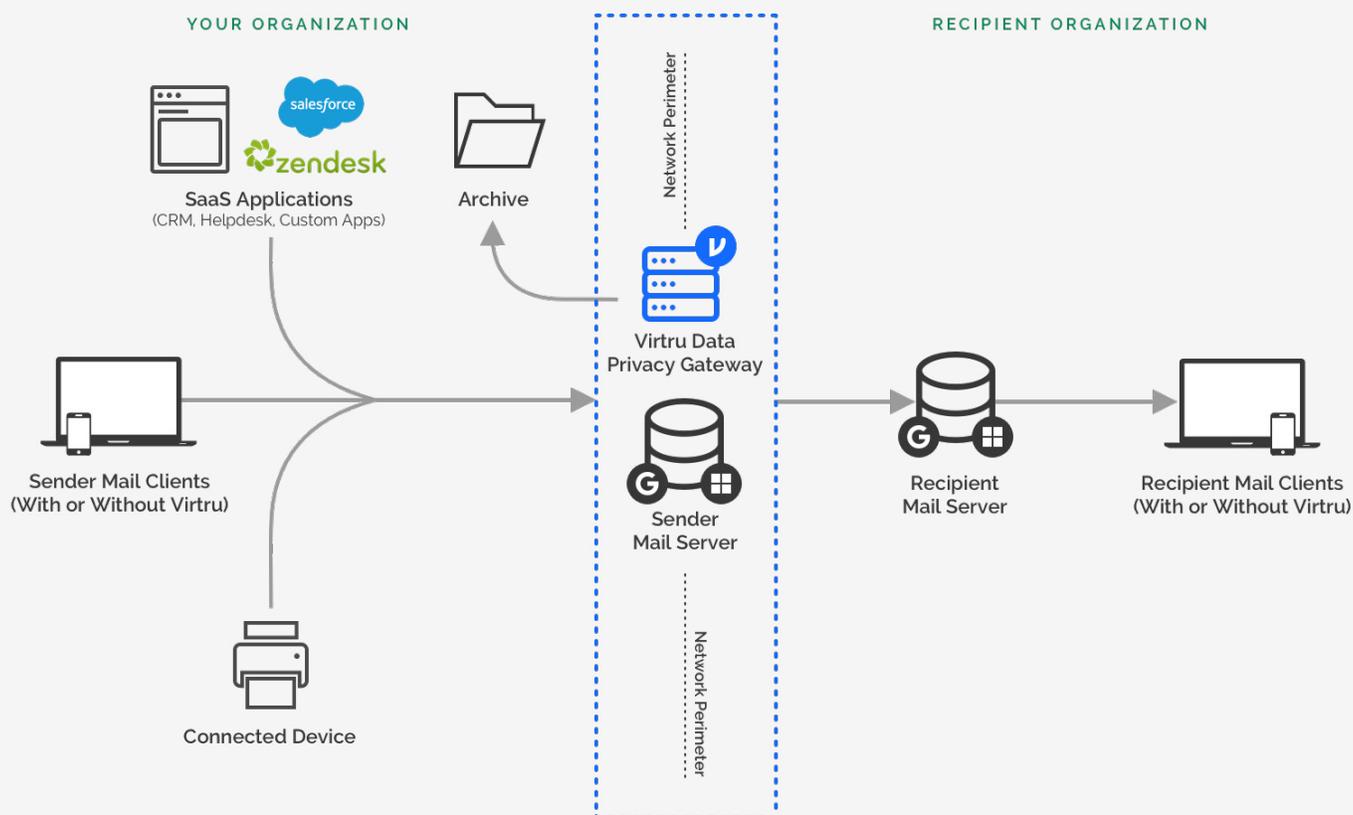

- **Outbound encryption** protects emails and files before they leave your domain to ensure communications stay compliant, private, and secure.

- **Inbound decryption** enables plaintext scanning by an application or MTA before it enters your domain for anti-malware, anti-spam, and content compliance.

- **Outbound decryption and archiving** allows emails to be copied and sent to archives to support eDiscovery and audit reporting processes.

- **Inbound encryption** secures PII and PHI within incoming messages sent from patients, customers, and partners, to ensure compliance.

"Virtru helps us maintain HIPAA compliance within new and existing communication platforms, while providing an incredibly easy experience for our patients. Our Virtru integration with Salesforce Health Cloud supports seamless, secure exchange of PHI without interrupting existing processes."

- Steven Schwartzberg, IT Director, *Tribeca Pediatrics*
